

# VOLTAIRE JOHN BITON

## AWS DEVOPS ENGINEER/FULL STACK DEV

### ABOUT ME

Been in the Software Development for my first 7 years of experience. Met different languages and tried many frameworks, built many kinds of applications, and has seen bad and clean code. It was all a fun journey until I got introduced to DevOps, particularly within the AWS Environment, which marked a significant turning point in my career. In just 2 years in DevOps, I crafted services such as an application performance monitoring, ticketing system for Devops related request, an internal VPN and mastered architecting VPCs, server management, security and Cost Optimization. I've been dedicated to this dynamic relationship and plan to nurture it further in the years ahead. I welcome the opportunity for collaboration, where together we can cultivate a fruitful partnership.
